Reclining mechanism

The back reclines in the range of 20°. In addition, the position of the back can be fixed at the time of the most forward tilt and the last tilt (18°).

Gas type vertical adjustment

The smooth-moving gas spring allows for adjustment according to height and build.

Seat depth adjustment mechanism

The seat depth can be adjusted according to the physique. In addition, by making the back of the seat more compact, the contact area of the thighs is reduced, which promotes blood flow.

Easy operation

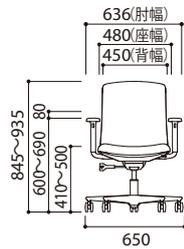

A single grip lever can be used to fix the reclining position and adjust the seat up and down. You can intuitively understand the operation method with pictograms on the lever surface.

Adjustable elbow UAAW type/UAAB type

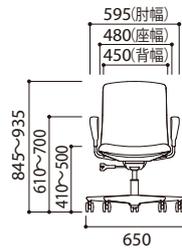

Vertical adjustment
Elbow pads are soft urethane molded products. Up and down adjustment of 80mm and front and back adjustment of 105mm are possible. Rotates 23° inward when fully forward.

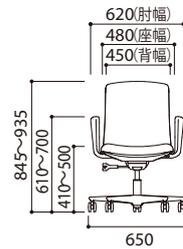

Jacket hanger

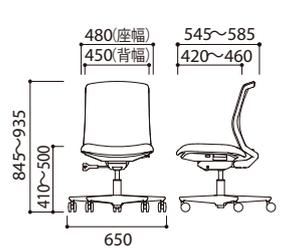

Inner dimension: 456mm

Inner dimension: 485mm

Inner dimension: 506mm

650

Hanger main body/nylon resin molding

* When you hang your jacket, pull it up and use it.

* Low back type cannot be used.
