Provides comfortable and stable reclining
Real Synchro® Reclining

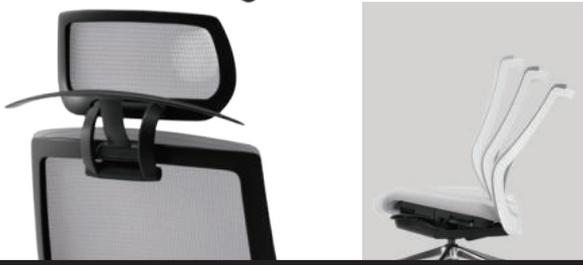

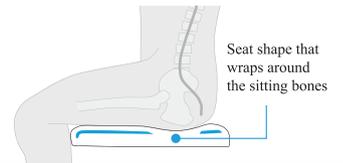

Focusing on the movement of the body when reclining, we can see that the force of the ball of the thumb on the sole of the foot pushing the floor is transmitted to the backrest via the pelvis. In order to transmit this force smoothly and to achieve smooth reclining without straining the abdominal muscles, back muscles, and thighs, we designed a reclining flexion point in the greater trochanter, which is the part where the waist flexes.

While reclining, the reaction force of the backrest is felt constant, and the reclining angle can be freely controlled simply by lightly shifting the weight. It also suppresses the gap between the body and the back seat and supports a comfortable sitting posture.

Supports ideal sitting posture
A seat that prevents misalignment of the seating position

It is designed so that the buttocks sink in accordance with the ischium part. Gently wraps the ischium when sitting, Suppresses the forward displacement of the seating position.

Adjust synchro mechanism

Gas type vertical adjustment

Seat depth adjustment mechanism

Fully adjustable elbow

The back & seat are slanted at different angles, gives you a natural sitting experience. Back One-touch leaning to your favorite angle. It is also possible to fix the degree.

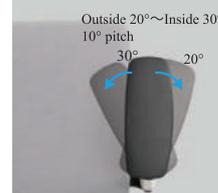

Smooth-moving gas spring. You can adjust it according to your height and physique.

Adopts a method in which the front edge of the seat expands and contracts. The seat depth can be adjusted according to the physique without changing the position of the body and the backrest.

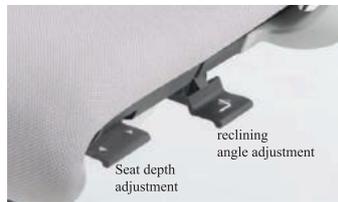

Vertical adjustment

Angle adjustment

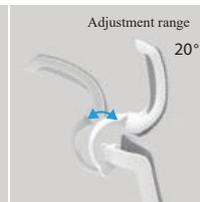

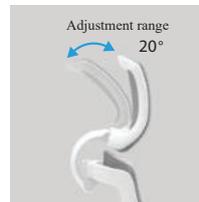

Elbow pads are soft urethane molded products. In addition to vertical adjustment of 83 mm, angle adjustment of 50° is possible. Support PC work.

Easy operation

The movement and adjustment of the back and seat are performed with the levers and dials on the back of the seat. Each is placed in an easy-to-reach position and can be moved with little force, so you can easily adjust it while sitting. In addition, pictograms are displayed on each lever and dial, so that you can intuitively understand the operation contents by looking at it.

Headrest

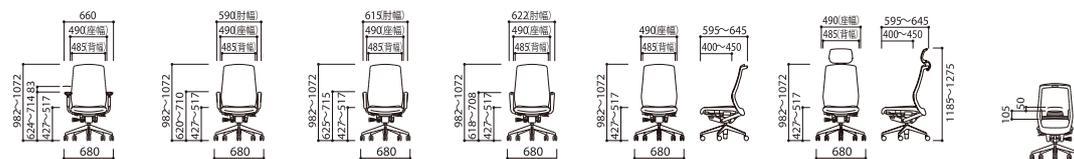

A headrest that comfortably supports a backward-leaning work posture. The angle can be adjusted in two places.

Lumbar support up/down adjustment

The height position can be adjusted within a range of 50 mm according to different physiques and preferences.
